Getting started with LINE is easy! Follow these steps to be up and running in no time!

- In order to create a LINE Bot you will need a LINE account. Once you've created a normal LINE account, and registered your email and password under 'Email Registration', you will have to create an LINE@ account. To do so, log in here with your normal LINE account: https://at.line.me/en/ and click on create a LINE@ Account.

- Once you've walked through the process of creating LINE@ account you can create an account login to the **Line Developers Console** by clicking here.
  - Select a provider: the provider is the entity (individual or company) that offers the app. You can put your individual or company name here.
  - Enter information for the Messaging API: you can select your app name, icon and description here. In this step you can also select the **plan** that you would like to use. **Only with a Developer Trial you will be able to push messages. Using a free account, you will not be able to push messages.** You can upgrade your Developer Trial by buying a premium ID.

- Click on the arrow under *Configuration not yet complete* to edit your channel settings. Here you will find your Channel ID and Channel Secret. Click on **issue** next to **Channel access token (long-lived)** in order to issue a new token access code.
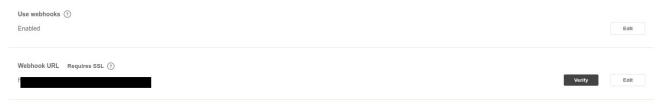

Send this three item to us:

1. ChannelID

2. Channel Secret

3. Channel access token

we will send you **Webhook URL**

- Below the Channel access token, click on **Use webhooks** – **enable** and press Update to save the adjusted settings.

- Add a **Webhook URL**

- The next step is scan the QRCode and share your bot.

Note: The LINE bot you have just created will be allowed to have up to 50 friends/contacts. If your bot requires more than that you can request an upgrade from LINE. This takes about 5-10 business days to process and will up the limit from 50 to 5000.
